People

- Architect: Simons Architects
- General contractor: Benchmark
- Engineers: SMRT and Becker Structural Engineers, Inc.

Products

- Murox, High Performance Building Systems, fabricated 9,865 square feet (915 m²) of load-bearing wall panels.
- The wall panels were delivered with DensGlass Gold® exterior sheathing ready to receive the masonry chosen by the customer.
- The 46 tons of joists, joist girders and structural steel components as well as the 16,155 square feet (1,500 m²) of steel deck required for this project were fabricated by Canam-Joists and Steel Deck.

Highlights

Gable joists were used to build the double-pitch roof with many openings.

The project was delivered on-time despite the limited amount of space available around the building.

Close coordination allowed Murox to meet the stringent customer requirements of positioning structural members outside of all classroom areas.
